

The New DSD4921RV PVR VAST™ Certified PVR

Built-in 500GB HDD

DSD4921RV PVR with built-in 500GB HDD Key Features

The UEC DSD 4921 RV PVR is an extension to the recently launched "Next Generation" VAST™ Certified, Twin Tuner, High Definition, DSD 4921 RV Set Top Box. Like the 4921 RV, the PVR version is packed with new technology, features and accessories, making it ideal for both the traveller and standard in home installation but with the inclusion of an internal 500GB hard disk drive for recording your favorite programs.

The twin tuner configuration allows full PVR trick modes, watch one event whilst recording another and is fully integrated with the EPG for easy setup for recordings.

UEC's market leading hardware and software ensure the receiver is 'future proof' through using latest technology and over the air software upgrade. The hardware is designed to withstand the harsh Australian environment that recreational vehicles are likely to experience including high temperatures, DC over voltage, reverse polarity and short circuit protection.

All of these class leading features are housed in the smallest VAST™ receiver on the market, making it the perfect solution for Caravan and RV enthusiasts wanting to watch and record their favorite programs whilst traveling.

Each DSD 4921 RV PVR product is supplied with: an internal 500GB hard disk drive, 240V AC wall mount power supply, 12V DC power cord & Aux connector for easy RV installation, HDMI plus 3x RCA Audio/Video cables, high quality remote control and tv EYE™ extender for installation into units or cabinets.

The DSD 4921 RV PVR is Hybrid Broadband TV (HbbTV) ready with all key software features to support Freeview Plus once available on the VAST™ platform.

- » VAST™ **Certified** with over the air software upgrade for future functionality.
- » **Smallest** VAST™ Certified Set Top Box, ideal for Caravan and RV enthusiasts.
- » **500GB** Internal hard disk drive included.
- » Market leading **performance** with simple installation wizard and fast channel change features.
- » Twin Tuner hardware supporting **full PVR** functionality including "My Recordings" hot key, Series, Event and Timer based recordings to ensure you never miss your favourite show, pause rewind of live TV all whilst incorporating future proof Uni-cable LNB technology (single cable).
- » Market leading Technology and Software packed with **features** to make the setup, viewing and operation as easy and intuitive as possible.
- » **Ruggedised** design and construction to suit the harsh Australian environment with several built-in features to protect your device when connected to 240V mains, Generators or 12V DC battery installations.
- » Extensive and **included accessories** pack for the DIY home installer or the Caravan/RV enthusiast.
- » Low power consumption for 12V DC installations and Australian **MEPS** (Minimum Energy Performance Standard) compliant ensuring we are environmentally responsible.
- » Backed by **20 years** of VAST™ experience and **national aftersales support** for real peace of mind.
